Steps

- Construct a base Model
- Construct a Decision Tree with root node.
- Calculate Similarity Weight

$$S.W = \frac{(\sum \text{Residuals})^2}{\sum P_i (1 - P_i)}$$

- Calculate Gain

$$S.W(\text{Root}) = \frac{0.25}{1.75} = 0.14$$

$$S.W(LC) = \frac{(\sum \text{residual})^2}{\sum P_i (1 - P_i)} = \frac{[-0.5 + 0.5 + 0.5 - 0.5]^2}{0.5(0.5) + 0.5(0.5) + 0.5(0.5) + 0.5(0.5)} = 0$$

$$S.W(RC) = \frac{[-0.5 + 0.5 + 0.5]^2}{0.5(0.5) + 0.5(0.5) + 0.5(0.5)} = \frac{0.25}{0.75} = 0.33$$

$$\text{Gain} = 0 + 0.33 - 0.14 = 0.19 //$$
